Our team of biologists support our clients in evaluating impacts to fish, wildlife, threatened and endangered plant and animal species, raptors, migratory birds, and their habitats. We make sure federal and state requirements are met for transportation, development, and oil and gas exploration projects during the planning stages and assist in developing mitigation strategies to move the project forward with a sensitivity to both environmental stewardship and economic benefit. LTE's biological services include:

- Habitat assessments and restoration
- Threatened and endangered species
- Migratory birds and raptor surveys
- Biological assessments
- EIS/EA
- Ecological risk assessments
- Vegetation surveys and plant community analysis
- Reclamation
- Categorical exclusions
- Noxious weeds
- Aquatic habitat assessment and macro-invertebrate aquatic surveys
- Integrated natural resources management plans
- Invasive species management
