LTE provides sound engineering services that address routine to complex environmental problems. We assess project needs, evaluate regulatory issues, evaluate life cycle costs, and make recommendations for designs to achieve the best solutions for meeting our clients' goals. With our experience, capabilities, and expert staff, we can provide the most viable solution for every project.

LTE engineering services include:

- Landfill design and operations plans
- Stormwater (drainage) engineering
- Wastewater treatment
- Process instrumentation design
- Dewatering plans
- Secondary containment design
- Underground storage tank installation and removal (petroleum storage tank)

Remediation Design & Implementation

Tank Installation & Removal
