

SITE INVESTIGATION

CONTACT

Chris Purcell, C.P.G.

303.962.5553 | cpurcell@ltenv.com

Site investigation is a broad term in this industry. But no matter its application, there is nothing more important than data integrity. Our approach relies on standard operating procedures that provide data that our engineers, compliance specialists, regulators, and clients can use to make critical decisions affecting the client's business. We get what data we need, and then we get the work done.

Our services include:

- Phase II Environmental Site Assessments
- Site characterizations/assessments
- Soil, groundwater, surface water, and air sampling and analysis
- Database management
- Due diligence
- Health and safety
- Risk assessment
- Remediation
- Materials management
- Brownfields

Chlorinated Solvents

Subsurface Investigations
