Whether we are collecting baseline water quality data from private landowners, preparing an Underground Injection Control permit application, oil and gas well permitting, well site reclamation, or performing Bradenhead testing, data integrity is critical to providing successful well compliance services. LTE's sensitivity to the public's concerns as well as our commitment to helping our clients' business operations move forward provide a balanced approach leading to successful projects.

Our services include:

- Well permitting and abandonment
- Oil and gas well permitting
- Underground injection control permitting
- Baseline water quality monitoring/reporting
- Site reclamation
- Waste management
- Midstream operations compliance
- Pipeline release inspections and compliance
- Produced water management
- Spill Prevention Control and Countermeasures plan preparation and inspections
