Protecting public health and safety via methane monitoring and mitigation is something we take great pride in at LTE. We own one of the few portable gas flux meters in the country. By using this tool to accurately measure gas flux over large areas means we're already one step ahead of the competition. Whether you need a partner to help recover lost resources or install a mitigation system, our team of experts will help get the job done.

LTE provides the following methane services:

- Fugitive gas survey
- Isotopic analysis and evaluation
- Gas sampling
- Seepage delineation
- Methane mitigation
- Vegetation survey
